Next-Generation AI Company

Opportunities for AI enthusiasts

This is a great opportunity to join the founding team of a cutting-edge AI company. We want to build an AI system for automated marketing operations but with an eye to enhancing the capabilities of a general AI system. Unlike other companies that may only copy the latest AI models without the potential for original innovations.

We are looking to fill 3 types of roles, but their definitions are flexible:

i. LLM (Large Language Models) application designer
ii. Machine learning to general AI transition engineer

Requirements (ideally)

- We're looking for candidates interested in the latest developments in AI such as GPT and LLM (Large Language Models).
- The candidate should have some familiarity with traditional machine learning (ML).
- Our approach will combine GPT and traditional ML to provide functions such as chat bots and Q&A (question answering).
- Experience with web-crawling may be an advantage.
- We are also planning to train from-scratch our own language model which is based on an improvement over the Transformer.
- If you are a beginner in these areas you are still encouraged to apply, as we think that a learning attitude is the most important.
- We're trying to foster a community spirit of knowledge sharing, learning, and creativity.
- We welcome your original ideas but you must also be open to accept criticism and competition, as we have to brace ourselves for the imminent challenge of strong AI on a global stage.
- Optionally you are open to explore Web3 ideas such as NFT and DAO
